Les Winningham

Chair, House Education Committee

Jamie Woodson

Chair, Senate Education Committee

WORK OF THE COMMITTEE

Tennessee Code Annotated 49-1-302(4)(a) specifies that the State Board of Education shall establish a review committee for the Tennessee basic education program (BEP). This committee is directed to meet at least four times a year and regularly review the BEP components including the preparation of an annual report on or before November 1 of each year.

This report includes "recommendations on needed revisions, additions, and deletions to the formula, as well as, an analysis of instructional salary disparity among local education agencies". This report considers "total instructional salary disparity among local education agencies, differences in benefits and other compensation among local education agencies, inflation, and instructional salaries in the southeast and other regions".

The BEP review committee is also directed "to give special consideration to costs of enhanced services to address the needs of at-risk children, the cost of educating English language learners, and the development and implementation of a system level fiscal capacity model."

In addition, House Resolution 286, adopted in 2006, directed the committee to "develop a consensus recommendation on a system-level fiscal capacity model which provides a phase-in process and hold harmless provisions and include such recommendation in its November 2006 report." From the legislative discussion, it was clear that the committee was to consider alternative models.

The enclosed report fulfills the requirements of the legislation and addresses the issues identified in the resolution.

EXECUTIVE SUMMARY

In the effort to improve essential components of the Basic Education Program (BEP)¹, the BEP review committee has performed a comprehensive review of the funding formula related to the following areas:

- System level fiscal capacity,
- Indemnification,
- Salary disparity, including salary and benefits,
- Funding for at-risk students,
- Funding for English language learners (ELL) and,
- Unit component costs improvements.

Each year, on or before November 1, this committee will submit a report to the Governor, the Select Oversight Committee on Education, and the State Board of Education identifying funding formula needs. This third edition of the report summarizes the findings of the committee and presents the immediate and extended priorities identified by the committee.

Review of Salary Disparity

Based on an analysis of total teacher compensation, the statewide measure of salary disparity for 2005-06 is similar to the measure observed in the previous year. Although a slight statewide increase in total teacher compensation was calculated, the observed difference is not statistically significant. Total teacher compensation is a procedure that compares instructional salary and health benefit differences *independent* of variation in local teacher training and experience. Total teacher compensation analysis also controls for variation in the local health plans selected by teachers.

A regional analysis of statewide disparity reveals a general decrease in disparity within five regions, including a noticeable decrease in the Knoxville region. Two regions were assessed as having a mixed profile of disparity, reflecting a relative balance of increases and decreases within each respective region. Four regions experienced an increase in salary disparity.

Consensus Recommendation of the Committee

The BEP Review Committee has arrived at consensus on the following language related to system level fiscal capacity and the November 1, 2006 report.

The BEP Review Committee Report on November 1, 2006 will include a discussion of various models for measuring fiscal capacity, a report on salary disparity, and recommendations for immediate priorities and extended priorities. The committee will continue to work on system level fiscal capacity issues and a small group will address issues related to adequacy, with a report and recommendations on both issues to be presented by February 15, 2007.

-

Tennessee Code Annotated 49-1-302 (4)(a)

Immediate Priorities

The Basic Education Program (BEP) Review Committee recommends moving forward with comprehensive, simultaneous, and timely improvements to the BEP, consisting of the following immediate priorities:

- An increase in funding for at-risk students,
- An increase in funding for English language learners,
- Full funding of growth in Average Daily Membership, and
- The restoration of the BEP instructional salary state share to 75%.

Extended Priorities

Unit cost components should more appropriately reflect the basic requirements of providing a quality education for students. These recommended improvements relate to the following areas:

- Reduction of Class Size to Fund Positions Outside the BEP
- Professional Development
- School Nurses
- Teacher Classroom Materials and Supplies (\$100 addition)
- Technology Coordinators
- Technology
- Alternative Schools
- Capital Outlay
- Transportation per ADM
- Readjustment of the Cost Differential Factor, in accordance with the Governor's 2004 Task Force Recommendations on Teacher Pay Equity.

REVIEW OF COMMITTEE DISCUSSION SALARY DISPARITY

Background:

The concluding opinion of Small Schools III² states that "the salary equity plan under Tennessee Code Annotated § 49-3-366 does not include equalization of teachers' salaries according to the BEP formula because it contains no mechanism for cost determination or annual cost review of teachers' salaries." Revisions to the formula and the infusion of salary equity funding beginning in the 2004 fiscal year have specifically addressed the issue of cost determination, incorporating real-world average salaries for teachers educating Tennessee students. Additionally, changes in statute now require the BEP Review Committee to conduct an annual cost review of teachers' salaries.

The committee has determined that the most appropriate measure for calculating salary disparity is total teacher compensation, based on "salary schedule strength" and "health insurance package strength", with the goal of representing a disparity baseline independent of regional and local variations in teacher training and experience, and which health plan a teacher selects.

Total teacher compensation is a procedure that compares instructional salary and health benefit differences *independent* of variation in local teacher training and experience. Total teacher compensation analysis also controls for variation in the local health plans selected by teachers.

The central tenets of this methodology include (Appendix A):

- 1) a statewide, weighted average salary for each cell, applied to the local salary schedule of each system;
- 2) a weighted average local health insurance benefit.

Discussion:

Issues of total teacher compensation were reviewed by the committee using the weighted average salary and weighted average insurance for each local system³. The committee discussed the fact that health care costs have increased since the infusion of salary equity funds in 2004. The disparity in weighted average local health insurance benefit has decreased very slightly since 2004.

³Total Teacher Compensation Data Analysis was performed by the Office of Education Accountability with data provided by the Department of Education and Tennessee Education Association.

²Tennessee Small School Systems v. McWherter

Findings:

An analysis of the coefficient of variation across Tennessee reveals the statewide measure of salary disparity for 2005-06 is similar to the measure observed in the previous year. Although the analysis shows a slight statewide increase in disparity in total teacher compensation, the observed difference is not statistically significant.

Coefficient of Variation ⁴			
Weighted	Weighted Average	Total Teacher Compensation	
Average Salary	Insurance Paid	(Salaries Plus Insurance Paid)	
0.0703	0.1863	0.0717	
0.0697	0.1894	0.0712	
0.0688	0.1894	0.0691	
0.0015	-0.0031	0.0026	
	Average Salary 0.0703 0.0697 0.0688	Weighted Average Salary Weighted Average Insurance Paid 0.0703 0.1863 0.0697 0.1894 0.0688 0.1894	

Using the total teacher compensation methodology, the statewide weighted average salary for Tennessee was \$38,972.46 in 2006, an increase of \$1,943.25 from the baseline year of 2004. When weighted average insurance paid by school districts is included, the average increases to \$44,284.27, an increase of \$2,550.15 from the baseline year of 2004 (Appendix B).

⁴The Coefficient of Variation is a representation of how closely values are clustered around the average.

REVIEW OF COMMITTEE DISCUSSION

Unit Cost Improvements

Background: Tennessee Code Annotated 49-1-302(4)(a) authorizes the BEP Review Committee to recommend funding formula improvements to the Basic Education Program. Reports from the previous two years have outlined the specific need for formula improvements related to at-risk students and English language learners. Based on these recommendations, in fiscal year 2006 the at-risk component was changed from an instructional salary component to a classroom component of the BEP in 2005, allowing greater flexibility in the use of funds for at-risk students.

In fiscal year 2007, the BEP includes an additional \$33 million in funding for at-risk students and \$2 million in funding for English language learners (ELL). The additions increased the percentage of at-risk students funded from 20% to 38.5% and lowered the student/teacher and student/translator ratios for ELL students from 50:1 to 45:1 and 500:1 and 450:1 respectively. The committee has established targets of 100% funding for K-12 at-risk students and a reduction in the student/teacher and student/translator ratios for ELL students to 20:1 and 200:1 respectively.

The committee has identified the need for additional formula improvements to reflect the actual cost of educating students in Tennessee. The committee requested analysis of the fiscal impact of various BEP unit cost components, based on the committee's identified extended priorities from the November 1, 2005 report. The unit component cost for the following components were analyzed.

Findings (Immediate Priorities): The Basic Education Program (BEP) Review Committee recommends moving forward with comprehensive, simultaneous, and timely improvements to the BEP considering the following immediate priorities:

- An increase in funding for at-risk students,
- An increase in funding for English language learners,
- Full funding of growth in Average Daily Membership, and
- The restoration of the BEP instructional salary state share to 75%.

At-Risk Students. As recommended by the committee in its 2004 and 2005 reports, the BEP should provide additional funding for 100 percent of at-risk students, as determined by the number of students eligible for free and reduced priced lunches. The BEP currently provides funding for 38.5 percent of students, based on funding required to reduce class size for such students by 5 at an average unit cost of \$509. The funds are provided as a classroom component, to allow schools flexibility in the types of services provided to at-risk students. The cost to provide funding for 67 percent of eligible students would be \$51.7 million.

Additional Funding of At-Risk

67% of Eligibles 100% of Eligibles \$51,708,000 \$111,642,000 **English Language Learners.** As recommended by the committee in its 2004 and 2005 reports, the BEP should provide additional funding for one ELL teacher for each 20 students and one translator for each 200 students. In addition, the allocation of ELL funds should be made a classroom component. The BEP currently provides one teacher per 45 students and one translator per 450. The cost to reduce the ratios to 1:30 and 1:300 would be \$10.4 million.

Additional Funding of ESL Translators, Teachers

1/200, 1/20	\$26,222,000
1/300, 1/30	\$10,407,000
1/400, 1/40	\$2,616,000

Full Funding of Growth. Currently, the BEP formula reimburses school systems during a current school year only for growth that exceeds 2 percent of ADM, at a cost of \$19 million. The BEP should provide funding to reimburse systems for 100 percent of growth in order to cover their actual costs for instructional positions and other costs. The additional cost to do this would be approximately \$24 million based on the experience of the last three years. This would be a one-time recurring improvement.

Growth Funding - 100%

FY2003-04	\$20,802,000
FY2004-05	\$26,406,000
FY2005-06	\$24,781,000

State Share of Instructional Salary. In 2004, a new category of the BEP was created for instructional salaries. The state share for BEP salaries was established at 65 percent, with the local share becoming 35 percent. Before 2004, instructional salaries were considered a classroom component and the state provided 75 percent of the funding and the local systems provided 25 percent. School systems adversely affected by the change were provided indemnification and were held harmless.

State Funding

68% Instructional			\$49,916,000
71% Instructional			\$119,690,000
75% Instructional	ANA		\$224,082,000

Findings (Extended Priorities): The BEP Review Committee re-affirmed that the following areas should be priorities as funding becomes available. Costs are based on 2007 funding levels.

Reduction in Class Size (Positions Outside the BEP). The BEP should provide funding to account for a portion of additional positions currently 100% locally funded that are outside the formula. This funding should be based upon a reduction in class sizes at grade levels K-12. Additional class size reductions should not be mandated, however. The cost to reduce class size by one student in regular classrooms K-12 (excluding art, music, physical education, vocational education, ELL, and special education is \$54.1 million).

Class-Size Ratio

Regular K-12 Classroom Tchrs Only*		
Reduced by One (1) Student		\$54,133,000
Reduced by Two (2) Student		\$114,215,000
Reduced by Three (3) Student		\$179,613,000
Reduced by Four (4) Student		\$252,128,000
Reduced by Five (5) Student		\$332,640,000
* Does not include Art, Music, PE, Vocational, El	LL, and Special Education	

Professional Development. A new component for professional development should be incorporated into the BEP, funded at 1 percent of instructional salaries. Georgia, for example, funds professional development at a rate of 1½ percent. The cost of funding at 1 percent of salary unit cost in the classroom component would be \$16.6 million.

Professional Development		
I Toressional Development	Aller	
1% of Salary Unit Cost		

School Nurses. The formula component for school nurses should be based upon a ratio of at least 1 nurse for every 1500 students. Such a level of funding would still exceed the ratio of 750 recommended by the National Association of School Nurses. The component is currently funded at a ratio of 1 school nurse per 3000 students. Additionally, the BEP spending mandate for school nurses should be removed from Tennessee code. The cost to reduce the ratio to 1:1500 would be \$10.6 million.

Nurses

1:750		\$32,764,000
1:1500		\$10,583,000
1:2000		\$5,213,000
1:2500		\$2,103,000

Teacher Classroom Materials and Supplies. The materials and supply allocation for classroom teachers should be based upon a rate of no less than \$300 per teacher. This funding level would be \$100 above the existing \$200 allocation. In order to ensure an appropriate delineation between shared pool and direct teacher resources, TCA 49-3-359(a) should be updated to reflect an increase of \$100 directly to classroom teachers. The cost would be \$3.9 million.

\$16,560,000

Material and Supplies \$300 per Classroom Teacher

\$3,893,000

Technology Coordinators. Technology Coordinators should be funded based upon a ratio of at least 1 coordinator per 2500 students, compared to the current ratio of 1 coordinator per 6400 students. The cost to reduce the ratio to 1:3000 students would be \$3.9 million.

Technology Coordinator

1:3000	\$3,850,000
1:4000	\$1,947,000
1:5000	\$845,000

Technology. Funding for technology should be substantially improved in accordance with a plan to support system-wide administrative and instructional technology. The recurring allocation of \$20 million has not been improved since the inception of the BEP.

Transportation. A review of funding components for transportation should be included in the committee's next annual report. Currently transportation funds are allocated to districts that provide transportation in accordance with a formula determined by the Commissioner of Education. Allocations are based upon the number of students transported, miles transported, and density of students per route mile at a cost of \$144.5 million.

Transportation per ADM

\$144,510,000

Capital Outlay. A review of the funding component for capital outlay should be included in the committee's next annual report. Funding should be based upon realistic levels as reported annually in the School Planning and Management Report.

Capital Outlay - Reduction to Square Footage per Student

\$122,170,000

Elem - 120.2 sq. ft. per student, (100 sq. ft. per student) Middle - 146.2 sq. ft. per student, (110 sq. ft. per student) High - 162.5 sq. ft. per student, (130 sq. ft. per student)

In addition to the unit cost factors listed above, the following component is also an extended priority:

Cost Differential Factor. The Cost Differential Factor should be readjusted based on the recommendation of the Governor's 2004 Teacher Pay Equity Task Force.

^{*} Based on School Planning & Management - 11th Annual Construction Report 2006

REVIEW OF COMMITTEE DISCUSSION

SYSTEM LEVEL FISCAL CAPACITY

An Alternative Model

Background: Since inception of the BEP, the fiscal capacity index has served as the formula's equalization mechanism. TCA 49-3-356 specifies that "from the local portion of [BEP funding], there shall be a distribution of funds for equalization purposes pursuant to a formula adopted by the state board, as approved by the commissioners of education and finance and administration. It is the intent of the general assembly to provide funding on a fair and equitable basis by recognizing the differences in the ability of local jurisdictions to raise local revenues."

In response to House Resolution 286 and taking into account the committee's recommendations in its report of November 1, 2005, the committee developed and evaluated an alternative method for equalization, in consultation with the Peabody Center for Education Policy. The goal was the creation of a method of equalization that would be explainable, understandable, and defendable. It was understood systems would be held harmless as recommended in the November 1, 2005 report.

Discussion: The committee reviewed the fiscal impacts of an alternative method for system level equalization. This method determines equalization on a computational flat tax rate based upon sales tax and property values as reported by the Department of Revenue for the State of Tennessee. The computational flat rate, within the alternative model, was not intended to establish a mandated tax levy, but rather a mechanism for determining the minimum local and state shares based on sales and property tax revenues that could be generated by specified sales and property tax rates.

Implementation of the alternative model would call for 1) the elimination of tax sharing across county, city, and special school district jurisdictions and 2) flexibility for local systems to raise the locally required match based on the flat computational rate applied for sales and property.

Although the methodology, met each of the three identified criteria, members of the committee expressed a number of reservations including the potential impacts of tax revenue redistributions. Tax implications included the impact of the proposed methodology on countywide debt services, increased complexity in annexation relationships, and the limited capacity of some counties to make up shortfalls based on the minimum revenue assessed at proposed computational tax rates.

The following table was created by the committed to guide future discussion related to issues of system level fiscal capacity. Subsequent to this discussion the committee came to consensus on the following recommendation in regards to system level fiscal capacity. Twenty votes "in favor", zero "opposed".

Consensus Recommendation of the Committee

The BEP Review Committee Report on November 1, 2006 will include a discussion of various models for measuring fiscal capacity, a report on salary disparity, and recommendations for immediate priorities and extended priorities. The committee will continue to work on system level fiscal capacity issues and a small group will address issues related to adequacy, with a report and recommendations on both issues to be presented by February 15, 2007.

Summary of Committee Discussion on System Level Equalization Scenarios

SYSTEM LEVEL PROTOTYPE			
ADVANTAGES	DISADVANTAGES		
Captures multiple sources of revenue including property, sales, and shared taxes.	Double counts property and sales in counties and cities with school systems		
Captures ability to pay (income, poverty)	Removes \$ from poorer counties		
Easily replicated from year to year	A change in one county causes a ripple effect		
Quasi Familiar—not a big change from 95 county model	Requires local match for formula improvements		
Not too complicated; state uses econometric			
models for other purposes such as projecting revenue	Requires hold harmless		
No impact on other finance issues			

ALTERNATIVE MODEL			
ADVANTAGES	DISADVANTAGES		
Simplicity, transparency	Changes tax bases of counties and cities, with important implications Annexation issues, PC 1101; may increase		
Step toward Total State system	competition between cities and counties for economic development		
State picks up improvements, assuming tax rates stay constant	Debt service on outstanding bonds; counties are currently obligated		
	Raises equity issues for supplementation, if the issue of adequacy is not addressed		
	May not hold up in courts, if adequacy not addressed		
	Establishes arbitrary rates for sales and property; weights subject to manipulation		
	Does not take into account ability to pay—median income or poverty		
	Requires hold harmless		

Summary of Committee Discussion on System Level Equalization Scenarios Continued

TOTAL STATE FUNDING			
ADVANTAGES	DISADVANTAGES		
Transparency, simplicity	Large change, politically difficult to enact		
Equitable	Difficulty in enacting a state property tax		
Not a "distribution" model	Public finance issues: tax abatements granted by industrial development boards		
	Capital outlay not considered		

95 COUNTY	MODEL
ADVANTAGES	DISADVANTAGES
No change, status quo, familiar	No change, status quo
Requires no new funds except for BEP maintenance	Treats unequal districts as if they faced the same fiscal challenges
Requires no hold harmless	Complexity because of multiple factors
Captures ability to pay (income)	Some factors are outdated, need to be changed
Makes adjustments within counties	A change in one county causes a ripple effect
	Requires local match for formula improvements
	Contributes to disparity in salaries

APPENDIX A Total Teacher Compensation Methodology

The calculation of total teacher compensation uses personnel and salary schedule information data provided by the Department of Education and TEA.

- 1. Calculation of statewide average teacher training and experience demographic. A statewide average teacher training and experience demographic is generated based on the percentage of teachers in each cell, from a Bachelors degree with 0 years experience to a PhD degree with 30+ years experience.
- 2. Calculation of weighted average teacher salary for each system. This statewide average teaching demographic is applied to each individual system's salary schedule resulting in an average weighted teacher salary schedule for each system. Meaning, the percentage of teachers in each cell is multiplied by the salary value for the corresponding cell. These values are subsequently added together to result in a weighted average salary.
- 3. Calculation of weighted average teacher insurance for each system. In developing the weighted average insurance, a statewide analysis of PPO, HMO, and POS health plans was researched and applied, including individual and family coverage. Each school system may choose any combination of plans to offer their employees. Some systems offer all three, while some may only offer a PPO and POS or only a PPO. The weighted average cost of the insurance package is calculated by creating a grid that placed the percent of teachers statewide that chose each type of plan and then applying that to the amount that each system paid.
- 4. Calculation of total teacher compensation. The total teacher compensation for each system is determined by adding the weighted average teacher salary for each system to the weighted average insurance for each system

APPENDIX B.1 Total Teacher Compensation

		SALARY SCHEDULE	SALARY SCHEDULE	PERCENT	INSURANCE PACKAGE	INSURANCE PACKAGE	PERCENT	COMPENSATION (OMPENSATION	PERCENT
	SCHOOL SYSTEM	FACTOR 04	FACTOR 06	CHANGE	FACTOR 04	FACTOR 06	CHANGE	FACTOR 04	FACTOR 06	CHANGE

APPENDIX C.2 Regional Disparity Methodology

All Calculations are Based on Total Teacher Compensation Data

Calculation of Dollar Disparity:

- 1. All dollar disparity values are compared to the system with the maximum total teacher compensation, within each fiscal year.
- 2. The ranked dollar value for each system is subtracted from the maximum, within each fiscal year.

Calculation of Percentage Disparity:

- 1. All percentage disparity values are compared to the system with the maximum total teacher compensation, within each fiscal year.
- 2. The dollar value for each ranked system is divided by the maximum. This percentage values is then subtracted from the number 1 or 100%.

Calculation of Change in Dollar Disparity:

- 1. Within each ranked position (e.g. rank #2 rank #10), the dollar disparity value of FY04 is subtracted from FY05. The calculation of the dollar disparity value is described above.
- 2. The calculation of change in dollar disparity should always be interpreted in comparison to the system with the maximum total teacher compensation.

Appendix D

Tax Base Methodology, Alternative Fiscal Capacity Model

This alternative fiscal capacity model presumes that each school district will draw all local revenues from the tax base within its boundary. Several adjustments in the data were necessary to build this structure.

County-wide School Districts

Generally, the county tax base is the school district tax base. The only exceptions are when the county-wide district contains a portion of a school district that crosses county lines. In this case, the portion of the school district is subtracted from the county tax base.

County School Districts in Counties with More than One School District

City and/or special school district tax bases are subtracted from the county tax base to arrive at the school district tax base. Adjustments may also be made if the county contains a portion of a school district that crosses county lines.

City School Districts

The city tax base is the school district tax base.

Special School Districts

The special school district property tax base and the WFTEADA share of the county sales tax base is the school district tax base.

Other Adjustments

Grade configuration – The tax bases for city and special school districts with grade configurations other than K-12 are divided among the city/ssd and the county school district. For example, the school district tax base for a city school district that serves grades K-8 will be 9/13 of the city tax base. The school district tax base for the county school district will include 4/13 of the city tax base.

Cross-county districts – The school district tax base for school districts that cross county lines is the sum of tax bases in all counties.

DRAFT

APPENDIX A Total Teacher Compensation Methodology

The calculation of total teacher compensation uses personnel and salary schedule information data provided by the Department of Education and TEA.

- 1. Calculation of statewide average teacher training and experience demographic. A statewide average teacher training and experience demographic is generated based on the percentage of teachers in each cell, from a Bachelors degree with 0 years experience to a PhD degree with 30+ years experience.
- 2. Calculation of weighted average teacher salary for each system. This statewide average teaching demographic is applied to each individual system's salary schedule resulting in an average weighted teacher salary schedule for each system. Meaning, the percentage of teachers in each cell is multiplied by the salary value for the corresponding cell. These values are subsequently added together to result in a weighted average salary.
- 3. Calculation of weighted average teacher insurance for each system. In developing the weighted average insurance, a statewide analysis of PPO, HMO, and POS health plans was researched and applied, including individual and family coverage. Each school system may choose any combination of plans to offer their employees. Some systems offer all three, while some may only offer a PPO and POS or only a PPO. The weighted average cost of the insurance package is calculated by creating a grid that placed the percent of teachers statewide that chose each type of plan and then applying that to the amount that each system paid.
- 4. Calculation of total teacher compensation. The total teacher compensation for each system is determined by adding the weighted average teacher salary for each system to the weighted average insurance for each system

APPENDIX C.2 Regional Disparity Methodology

All Calculations are Based on Total Teacher Compensation Data

Calculation of Dollar Disparity:

- 1. All dollar disparity values are compared to the system with the maximum total teacher compensation, within each fiscal year.
- 2. The ranked dollar value for each system is subtracted from the maximum, within each fiscal year.

Calculation of Percentage Disparity:

- 1. All percentage disparity values are compared to the system with the maximum total teacher compensation, within each fiscal year.
- 2. The dollar value for each ranked system is divided by the maximum. This percentage values is then subtracted from the number 1 or 100%.

Calculation of Change in Dollar Disparity:

- 1. Within each ranked position (e.g. rank #2 rank #10), the dollar disparity value of FY04 is subtracted from FY05. The calculation of the dollar disparity value is described above.
- 2. The calculation of change in dollar disparity should always be interpreted in comparison to the system with the maximum total teacher compensation.

Appendix D

Tax Base Methodology, Alternative Fiscal Capacity Model

This alternative fiscal capacity model presumes that each school district will draw all local revenues from the tax base within its boundary. Several adjustments in the data were necessary to build this structure.

County-wide School Districts

Generally, the county tax base is the school district tax base. The only exceptions are when the county-wide district contains a portion of a school district that crosses county lines. In this case, the portion of the school district is subtracted from the county tax base.

County School Districts in Counties with More than One School District

City and/or special school district tax bases are subtracted from the county tax base to arrive at the school district tax base. Adjustments may also be made if the county contains a portion of a school district that crosses county lines.

City School Districts

The city tax base is the school district tax base.

Special School Districts

The special school district property tax base and the WFTEADA share of the county sales tax base is the school district tax base.

Other Adjustments

Grade configuration – The tax bases for city and special school districts with grade configurations other than K-12 are divided among the city/ssd and the county school district. For example, the school district tax base for a city school district that serves grades K-8 will be 9/13 of the city tax base. The school district tax base for the county school district will include 4/13 of the city tax base.

Cross-county districts – The school district tax base for school districts that cross county lines is the sum of tax bases in all counties.
